PROJECTS

SmartBrain V-2 | Face Detection App   DEMO SEE LIVE SOURCE CODE

When you enter an image URI in the input tag and press detect, It'll detect all the faces in the image using an image recognition API, and put boxes around them.
In the front-end it uses ReactJS.
In backend it has its own RESTful API server with express.
It stores user information such as username and also hash passwords securely in a PostgreSQL database.
SmartBrain V-2 is a fully responsive web site, and the react-tsparticles make it look even cooler.
And lastly the app was deployed on Heroku.

FastKitchen | Pizza Shop App   DEMO SEE LIVE SOURCE CODE

FastKitchen has a simple fully responsive layout which allows its users to quickly and conveniently order food.
It allows customers to pick from different types of pizza from your restaurant and with the pizza constructor feature they can customize their pizza by changing flavors, size, toppings etc. according to their taste, and place an order.
And lastly the project was deployed on Netlify.

DripShop | Clothing Shop App   SEE LIVE SOURCE CODE

It uses Redux to store state.
It react router to move between pages.
And stripe to make online purchases.
It uses tailwind for styling the app.
